

PULSE[®] FC

FLUID CONTROL

TRANSFORM ACCOUNTABILITY INTO PROFITABILITY

Pulse FC Fluid Control provides service operations with accuracy and command to automate and regulate fluid dispenses for optimal accountability and profitability.

TRACK BULK FLUIDS AUTOMATICALLY, ACCURATELY

With Pulse FC, dispense only precise volumes to create efficiencies for your entire shop operation. Monitor how much fluid you're using. Choose the amount of fluid each technician can dispense. Maintain accurate inventory. Streamline processes to improve productivity and uncover hidden profitability while adding transparency to everyday tasks.

SIMPLIFY BULK FLUID CONTROL

- Easily upgrade from SD Preset meters to Pulse FC
- Control exactly how much fluid is dispensed to improve inventory management
- Fast, easy wire-free setup and configuration reduces installation costs
- Generate simple reports to make more informed decisions
- Add fluids or dispense points seamlessly as your demands grow
- Easily upgrade to Pulse Pro for even more management, analytics and DMS integration

GAIN INSIGHT INTO AND CONTROL OF YOUR BULK FLUIDS

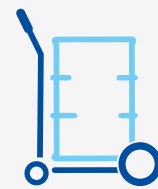

Simplicity. Avoid surprises, interruptions and delays. Fluids are easily controlled so technicians can spend more time serving more customers.

Accountability. Be assured every vehicle or machine receives the appropriate amount of fluid for more accurate billing.

Scalability. Add Pulse FC into almost any environment quickly, even retrofit applications and avoid excessive installation costs and delays. You can also easily upgrade to Graco's Pulse Pro.

Mobility. Pair with mobile dispense units and drums quickly so your team can conveniently dispense without delays, hassles or extra steps.

UNCOVER HIDDEN PROFITS – AND AN EASIER WAY TO WORK

Innovation leads to accountability

Pulse FC is wire-free, so installation and configurations are easier and cheaper. We've replaced the big box console with fast, reliable and convenient fluid cards scanned at easy-to-handle meters, so users can employ the same type of familiar technologies they use elsewhere. It's an innovative new system designed to simplify work while optimizing accountability for today's modern shops.

Pulse FC Software.

Accurately track the amount of fluid dispensed. Data is captured automatically. Simple reports including fluid levels and dispenses can be printed at any time to make fast, informed decisions regarding billing, inventory, staffing and more.

Pulse FC Programmer.

Enjoy an easy-to-use, easy-to-install out-of-the-box fluid control system designed for fast, wire-free setup and configuration. Easily pre-program Pulse FC fluid cards to dispense only the correct fluid and authorized amount, minimizing dispense errors and gaining optimal profitability.

Pulse FC Fluid Cards.

Technicians are given pre-populated fluid cards to scan directly on the SD preset meter's built-in NFC reader. There is no limit to the number of cards that can be issued at any given time – nor the amount of fluid that can be dispensed. Cards can be reprogrammed at any time.

SD Preset Dispense Meter.

Give technicians everything they need at their fingertips. Simply scan pre-programmed fluid cards on the meter's interface screen to begin dispensing. Once the pre-programmed amount of fluid has been dispensed, the meter stops automatically. See the exact amount of fluid pumped on the easy-to-read LCD screen.

Roll Around.

Dispense fluids anywhere in your shop without compromising security or productivity. Unlike box systems, Pulse FC allows technicians the freedom to transport 55-gallon containers to any dispense site easily without assistance or delays.

Graco leveraged more than **50 years** of fluid handling expertise – from Fluid Commander (shown below) to the Matrix® System to the revolutionary Pulse Fluid Management and Control solutions. Pulse FC is designed specifically to bring accountability to the service bay by putting complete control of fluids into the hands of technicians and parts managers. The breakthrough fluid control system is scalable and versatile. It's wire-free, so it's easy to install without interrupting daily operations. And it's incredibly accurate. Retrofit into existing fluid control applications or use it for any emerging application requiring transparent fluid control.
